

Computer-Based Training Design & Development

This facilitator-led course will provide participants with the knowledge needed to decide where and how to use computer-based courseware to achieve specific learning objectives. Participants will be immersed in computer-based courseware issues and techniques that will give them the information needed to get started in curriculum design and development.

Computer-Based Training Design & Development is a two-day course designed to enable participants to make decisions about whether CBT is appropriate for their training needs, and if so, to provide an understanding of the process of development, the decisions that must be made, and the tools that are available.

Learning Objectives

Upon completion of this course, participants will be able to:

- Identify the advantages and disadvantages of CBT
- Identify the features and characteristics of CBT
- Determine the suitability of course content for CBT
- Understand the process of CBT course production
- Understand design factors and teaching methodologies of CBT
- Define the steps of the CBT development process
- Analyze the lesson plan and its parts
- Write units of instruction

Benefits:

1. Learn how and where to use CBT as a cost effective training tool.
2. Be prepared to begin the CBT design process.
